

BIKEPACKING FOR FREEDOM SEEKERS

Looking for the light of your gaze.

We wake up every day looking for a goal, looking to find what makes us feel good. We search and search until we get it wrong, we search for what we don't really want because we don't want to realise that the answer is not there.

We set out on a journey looking to be free when in fact nature itself has already given us freedom, the freedom that we mercilessly take away from ourselves every day. Nature often reminds us of how much we digress, reminds us of the good things about being at its side, reminds us every day of how much we can enjoy just by taking a little care of nature.

Once again this year we have made an effort to offer you a high quality product, with numerous improvements and technological advances, so that every moment you travel is a moment of absolute enjoyment. Many new ideas, many new routes, thousands of kilometres and of course your suggestions, to make your favourite brand better every day, to adapt it to all of you, to make the journey bring back a smile to your face and to make you want to start each day as if you were about to embark on a new holiday.

Nature reminds us every day with its beauty that what we are looking for is right in front of our eyes, that the light we long for is its gaze, because nature looks at us and we, even knowing its value, continue to look for the meaninglessness of things and nature, every day, every moment, every pedal stroke, every time we fall, every time we get up and every journey we make, reminds us again that its light is always shining and that its gaze is what we are really looking for and longing for, but we, without realising it, we fall back into the routine of chaos, noise and nonsense.

Thank you for taking us with you on your adventures without limits, we want that day to be every day! On the road.

At GEOSMINA we are here as usual, to make you feel the passion for travelling, to make you remember, to make you enjoy the value of each moment, to make your light shine again, to accompany you on a new journey, to write a new story together with you. Always by your side, we'll see you on the way.

TECHNOLOGY

The material used to manufacture our Geosmina bags is PVC-free. This, in conjunction with the thermoplastic features, means that they are recyclable and can therefore be discarded in the corresponding containers for future reuse. All of our Geosmina bags include this feature.

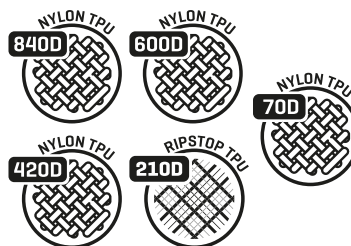

Completely waterproof and resistant to water and dust. Any items carried inside our products bearing this icon will reach the destination completely dry.

Waterproof zippers that prevent water from seeping into the bag. They are essential in our tube bags since raindrops fall directly on them. All of our zippers also come with a grip for easy opening and closing, even when wearing winter gloves.

Our YKK plastic y-shaped seals are light and resistant. Each one is designed to bear up to 88 lb [40 kg] and 143 lb [65 kg] depending on the model. The flexible tabs are designed to prevent breakage (even when twisted) and the rounded angles enable easy opening and closing.

Nylon is an extremely tear and abrasion resistant fabric. All this without adding much weight to the bags. These are some of the characteristics that made us choose this material, but also its high drying speed, its extreme resistance to high temperatures, its resistance to mould and mildew and its great resistance to stretching and folding. Different densities ranging from 840D to 70D strategically used according to the characteristics of the bags and the required needs.

TECHNOLOGY

Heat sealed seams on the inside with thermoplastic to ensure maximum watertightness. No water will get in or out of your bags.

The **QuickRelease system** for attaching and detaching the panniers is very easy to use. The top hooks are opened or closed by pulling the top handle. These hooks are equipped with soft bushings to prevent damage to the rack tube, thus improving the service life of the saddlebag. Our QuickRelease hooks are compatible with 8 to 16 mm tube holders by means of removable sleeves for **8, 10, 12 and 16 mm** diameters and can be adjusted without the need for a tool.

Our Nylon is treated with a polyurethane [PU] coating. This polymer repels small amounts of water to delay permeability and improves the material's resistance thanks to its strong resistance to abrasion, extreme temperatures and moisture. All of our Geosmina bags undergo this process.

The **High Frequency welding process** for the union of different Nylon panels makes your bag totally watertight, which turns it into a kind of armoured container against water and dust from the outside. This process also allows our Geosmina bags to adopt shapes that help to improve their ergonomics and aesthetics.

This elastomer is **highly resistant to temperature changes** [between -31 °F and 284 °F / -35 °C and 140 °C], traction and tearing; it is resistant to acids, fuels and oils; and it is also **fireproof**. Its **high load capacity** (90 kg per square centimeter) and low weight make it the perfect material for reinforcing key areas of Geosmina Bikepacking bags..

Logos and details in reflective 3M paint to ensure they are easily seen in the dark. Safety is key and we must make ourselves visible to drivers when riding in low-light conditions. We want you to keep enjoying your adventure, even after the sun goes down.

GRAVEL, MTB & CYCLOTOURISM

GEOSMINA

SADDLE POCKET BAG

Our saddle pocket bag for tools is made of Nylon 600D and has seams that are sealed by means of high frequency welding technology. This material is completely **waterproof** and has an external PU [Polyurethane] coating that repels water and makes the bag dry quickly, when in contact with the air. The bag has a TPU [Thermoplastic Polyurethane] coating that, together with the sealed seams, makes the bag completely watertight. The bag has a **rigid chassis** on the inside and a practical roll-top closure, and is attached to the saddle by means of new, redesigned Velcros. The reflective brand logo ensures that you are quickly visible to others when it's dark.

SPECIFICATIONS

- 600D Nylon outer shell with waterproof TPU inner laminate.
- Seamless, high-frequency welded structure. **100% waterproof.**
- Single opening with roll-up closure to guarantee watertightness. 100% watertight.
- **Rigid inner chassis to give consistency to the whole bag and protect from impacts.**
- Redesigned Velcro adjustment for increased stability.
- Hypalon back panel with slots to allow installation of light or auxiliary straps.
- Reflective details and logos.

GEOSMINA

SEAT BAGS

Our seat bags are entirely made of **Nylon 600D** and **Hypalon**. They also have seams, sealed by means of high frequency welding technology. Nylon 600D is completely **waterproof** and has an external PU [Polyurethane] coating that repels water and makes the bag dry quickly, when in contact with the air. The bags also have a **TPU** [Thermoplastic Polyurethane] coating that, together with the sealed seams, makes the bags completely watertight. The seat bags attach to the bike with two redesigned Velcro straps. Two wide Velcro straps, reinforced with Hypalon, get attached to the seat post and two further big Velcro straps and a **stabilising belt** are attached to the rails of the saddle. The latter straps feature heavy-duty **turnbuckles** and buckles that allow you to pull the bag tighter, so it always stays firmly attached to the seat post.

The bags are closed via a roll-top closure that ensures watertightness and are further secured by straps and **buckles**. The bags include an elastic band on the upper part that allows an extra load to be carried on the outside, as well as Hypalon reinforcements with reflective details to be able to install rear lights and thus improve the cyclist's safety. The lower part of the bags and the front panel [the one that rests on the seat post] is made up of Hypalon panels that are highly resistant and adherent. The bags are available in two sizes: **Small with a 10-liter capacity** and **Large with a 15-liter capacity**. The bag features the brand's logos on a reflective material for better visibility.

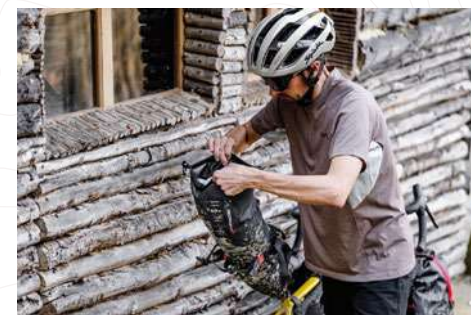

SPECIFICATIONS

- 600D Nylon outer shell with internal TPU waterproof and Hypalon laminate.
- **100% waterproof.**
- Roll-up closure to guarantee watertightness.
- Reinforced bottom and side panels keep the load stable.
- Abrasion and splash resistant Hypalon bottom panel.
- Adjustable and removable bungee on top panel.
- Triple Hypalon rear panel with slots to allow installation of light or auxiliary straps.
- **Stabilizer belt.**
- Reflective details and logos.

GEOSMINA

SEAT BAG YOU -DEE

Designed for high-performance use in **ultra-distance races**, such as Audax and Brevets. Just with the soul of its bigger sisters of 10 and 15 litres. Due to the use of TPU-Nylon 600D and Hypalon reinforcement, this light and efficient saddlebag is **100% waterproof** and can withstand even your toughest handling.

The roll closure ensures that the **5-litre storage space** is protected from water and dust. In addition, the back of our You-Dee saddlebag has a triple-reinforcement of Hypalon, to which you can attach your rear light.

You don't like the adrenaline of competition and prefer relaxed and casual rides? Thanks to its capacities and low weight, this model is also suitable for short rides, on which you don't want to lack anything.

SPECIFICATIONS

- 600D Nylon outer shell with internal TPU waterproof and Hypalon laminate.
- **Seamless, high frequency welded structure. 100% waterproof.**
- High resistance to abrasion and tearing.
- Reinforced bottom and side panels keep the load stable.
- Abrasion and splash resistant Hypalon bottom panel.
- **New lighter, smaller and more aerodynamic design to adapt to ultra-distance challenges. To carry only what you need.**
- Triple Hypalon rear panel with slots to allow installation of light or auxiliary straps.
- Reflective details and logos.

GEOSMINA

HANDLEBAR BAG

Our handlebar bag is made entirely of Nylon 600D and Hypalon and has seams, sealed by means of high frequency welding technology. Nylon 600D is completely waterproof and has an external PU [Polyurethane] coating that repels water and makes the bag dry quickly, when in contact with the air. The bag has a TPU [Thermoplastic Polyurethane] coating that, together with the sealed seams, makes the bag completely **watertight**. Our handlebar bag features a roll-top closure that ensures watertightness.

The bag gets attached to the handlebar with Velcro straps that are reinforced Hypalon, so as not to damage the handlebar and thus offer more grip. The bag can also be attached to the frame or the handlebar stem with an included extra strap to prevent swaying. The new rear panel for reinforcement is made of padded Hypalon and prevents the cables and the bag from suffering from friction, while offering great stability, firmness, and durability. The bag also includes an elastic band in the front that functions as a net, offering the possibility of adding some extra load. Our handlebar bag also features the brand logos in a reflective material for better visibility.

VOLUME:	10 liters
MEASUREMENTS:	60 * 27 * 27 cm
WEIGHT:	340 gr.
MAX. LOAD*:	2 kg.

SPECIFICATIONS

- 600D Nylon outer shell with internal TPU waterproof and Hypalon laminate.
- Seamless, high frequency welded structure. 100% waterproof.
- **Double side opening with roll-up closure to guarantee watertightness.**
- Hypalon lined fastening straps with reinforced seams and metal buckles.
- **New reinforced rear panel: Hypalon laminate with internal high density foam that increases stability while protecting handlebars and cables from chafing.**
- Removable front bungee for quick and secure attachment of items.
- Reflective logo.

GEOSMINA

HARNESS ROLL BAG

Its harness is especially designed for long distance bikepacking. It is made of high resistance thermoplastic and coated with Nylon 600D. It has several buckles that allow you to add objects and extra load with the help of auxiliary straps. The harness gets attached to the handlebar with oversized straps and high-performance buckles from YKK that can be tightened with just one hand. The interchangeable **high-density foam pads stabilize the load and absorb the shock from the ground**. Thanks to its high adaptability, the installation of the harness to the bike and handlebar is completely up to the cyclist's preference.

The harness can be used in two ways: Either to transport cargo, such as a sleeping bag or a tent, or it can be used with the included, removable front bag that is made of Nylon 420D and treated with PU (Polyurethane) on the exterior. The front bag also has a TPU (Thermoplastic Polyurethane) coating on the inside, which gives the bag **100% impermeability and watertightness**. Although our harness roll bag is very light and handy, we have not made compromises to its durability. **It is your best companion for long distances and especially if flat MTB handlebars are your thing.**

SPECIFICATIONS

- Flexible harness with different supports to be able to carry the bag (included) to sleeping bags, tents, ...
- 420D Nylon bag with TPU laminate with double side opening and roll-up closure to guarantee watertightness (included).
- Wide fastening straps.
- Interchangeable high density foam pads (2cm. wide) to allow the perfect fit to your handlebars.
- Reflective logos on harness and bag.

MAKI HANDLEBAR BAG

This bag is second to none. It offers the perfect storage for you to carry only the essentials you need for your road, gravel, or city bike. You can carry a lot in very little space and without paying for excess weight. It doesn't get any better than this, does it? Yes, it does, because the bag is also **100% waterproof**, lightweight, elegant and offers everything you could wish for.

The MAKI has a capacity of 2.5 litres and is made of 600D TPU Nylon. The seamless bag is made by means of high frequency welding. Thanks to the special material and the water-resistant zippers, the bag offers the best protection for your electronic devices, energy bars, gels, tools, or a dry change of clothes. The Maki is attached to the handlebar with two practical, removable Velcro straps that are reinforced with Hypalon. The removable straps protect the bag and improve stability between the bag and the handlebar. An additional elastic band fixes the bag firmly to the frame and ensures perfect stability without swinging.

If you want to keep even more luggage handy, the elastic mesh and the two side mesh pockets offer you additional storage space. These small outer pockets are ideal for storing the wrappings of energy bars that you eat during the ride.

SPECIFICATIONS

- 600D Nylon outer shell with internal TPU waterproof
- **Seamless, high frequency welded structure. 100% waterproof.**
- Abrasion and splash resistant.
- Waterproof zip with puller [2 sets]: makes it easy to use even when wearing gloves.
- Front bungee for quick and secure attachment of items.
- Double Velcro reinforced with Hypalon.
- Double outer side pocket.
- Reflective logo.

GEOSMINA

SMALL HANDLEBAR BAG

Our small handlebar bag is made entirely of Nylon 600D and Hypalon. It features seams that are sealed by means of high frequency welding technology. Nylon 600D is completely waterproof and has an external PU (Polyurethane) coating that repels water and makes the bag dry quickly, when in contact with the air. The bag has a TPU [Thermoplastic Polyurethane] coating that, together with the sealed seams, makes the bag completely watertight.

The bag also has a roll-top closure that further ensures **watertightness**. Our small handlebar bag is attached to the handlebar with Velcro straps that are reinforced with Hypalon, so as not to damage the handlebar and thus offer more grip. To prevent swaying, you can use the included extra strap and attach the bag to the frame or the handlebar stem. The new reinforcement rear panel is made of padded Hypalon and prevents the cables and the bag from suffering from friction, while offering great stability, firmness and resistance. The bag also has an elastic band net in the front, so you can add some extra load.

Our small handlebar bag also features the brand logos in a reflective material for better visibility. It has an inner, removable pocket with a zipper, making it ideal for storing documentation, keys, or money. **This product is best suited for daily use, on short or medium distance rides.**

SPECIFICATIONS

- 600D Nylon outer shell with waterproof TPU inner laminate.
- Seamless, high-frequency welded structure. 100% waterproof.
- Roll-up closure guarantees watertightness.
- **New reinforced rear panel:** Hypalon laminate with internal high density foam that increases stability while protecting handlebars and cables from chafing.
- Removable front bungee for quick and secure attachment of items.
- Removable inner pocket.
- **Removable shoulder strap.**
- Reflective logo.

STEM POUCH BAG 0.5 & 1 liter

In our practical stem pouch bag, you can stow anything you want, including an extra drink bottle. This new compact stem bag is entirely made of Nylon 600D, which makes it completely waterproof. The external PU [Polyurethane] coating also repels water and makes the bag dry quickly when in contact with the air. The bag has a TPU [Thermoplastic Polyurethane] coating that makes it completely waterproof. It also has an extensible Nylon closure in the form of an elastic band that can be tightened and loosened with just one hand. The foam interior acts as insulation to maintain the temperature of your drink, in case you decide to use it as an extra bottle holder. The interior is lined with a high-contrast, fluorescent Ripstop and is also **completely waterproof**. The bag gets attached to the handlebar and the handlebar stem with Velcros that are reinforced with Hypalon. Other great features of the bag are its reflective logos and a practical external elastic mesh pocket that gives you an easier access to your cargo. **Once you mount it, you won't be able to go on a trip without it.**

TOP TUBE BAG DF

Our top tube bags are made of Nylon 600D and Hypalon with seams, sealed with high frequency welding technology. Nylon 600D is **completely waterproof** and has an external PU [Polyurethane] coating that repels water and makes the bag dry quickly, when in contact with the air. The bag has a TPU [Thermoplastic Polyurethane] coating that, together with the sealed seams, makes the bag completely watertight. The zippers are waterproof. The interior is reinforced with a chassis that stabilizes the bag and protects the load from possible shocks. The internal chassis can be removed in case you want to use the bag to carry larger items. The bag is available in two sizes: Small with 0.6 liters and Large with a capacity of 1 liter.

There are two ways to attach our DF bag to the frame:

1- With the three Hypalon-reinforced Velcro straps that can be removed and put on, depending on the needs of the cyclist and the type of bike. As the bags come with 2 complete sets of straps in different lengths, the bags are compatible with frames with thin steel or titanium tubes as well as with wide hydroformed aluminium or carbon tubes.

2- With screws [if the tube of the bike has threads]. The bag also has a front outlet for cables such as the battery of your bike light or a power bank. All top tube bags feature the brand's logos in a reflective material for better visibility and 1 set of zipper pulls in two colours so you can give it the look that you personally prefer.

GEOSMINA

FRAME BAGS

The new frame bags are made of Nylon 600D and Hypalon and have seams, sealed with high frequency welding technology. Nylon 600D is completely **waterproof** and has an external PU [Polyurethane] coating that repels water and makes the bag dry quickly, when in contact with the air. The bag has a TPU [Thermoplastic Polyurethane] coating that, together with the sealed seams, makes the bag completely watertight. The zippers are waterproof. The interior is reinforced with a padded chassis that gives the bag stability and protects the load from possible knocks. The bag has a double side pocket [one on each side of the bag], each one containing different compartments, including one with a waterproof zipper. Both compartments are lined in yellow 210D Ripstop Nylon with TPU coating.

We offer our frame bags in two different configurations that make them adaptable to most frames. The so-called GRAVEL-Model is meant for Gravel Bikes or for bikes that are meant for the road. It is especially suited for bikes that have frames with little sloping and longer head tubes which means that the top tube and the diagonal tube have more space between each other in this front area. On the other hand, the so-called MTB-Model is meant for mountain bikes that have greater sloping and short head tubes. The name difference between the two models does not imply that they can't be used outside their respective discipline, but rather that depending on the shape of your frame, one may fit better than another, or even that both types can fit your bike.

The bags come in three sizes: Small [1.5 liters], Medium [3 liters] and Large [5 liters]. The bag gets attached to the frame by means of removable and interchangeable Velcros, reinforced with Hypalon. They come in two different lengths, so they fit on any tube. All frame bags feature the brand's logos in reflective material for better visibility and 1 set of zipper pulls that come in two colours so you can give your bag the look you want.

SPECIFICATIONS GRAVEL

- 600D Nylon outer shell with waterproof TPU inner laminate. Seamless, high-frequency welded structure. 100% waterproof.
- Designed to better adapt to frames with longer steerer tube, such as Gravel and Road frames.
- This design facilitates the installation of bottle holders on the frame.
- Inner pockets in 210D Nylon 100% waterproof Ripstop in yellow to contrast and allow you to quickly locate your items and carry your load tidily.
- Double side pocket with waterproof zip with puller (2 sets): makes it easy to use even when wearing gloves.
- 2 sets of interchangeable Hypalon reinforced Velcro straps for weight resistance (7 attachment points).
- Reflective logos.

FRAME BAG YOU -DEE

Equipment that is lightweight, ergonomic and highly functional, will improve your performance in specific disciplines. With these very requirements in mind, we have developed the You-Dee 2.5 litre frame bag, which is designed for ultra-distance racing and self-support races. Like our entire product line, it is 100% waterproof, completely seamless and made of 600D TPU Nylon. It also comes with removable and replaceable Velcro straps with Hypalon reinforcement.

The double side pockets are lined with yellow 210D ripstop Nylon, which thanks to its high colour contrast, allows you to immediately see your items at a glance. Both pockets are sealed with waterproof zippers that keep the water out. Thanks to its special pull system, the bag can be opened and closed in no time with just one finger, even when wearing winter gloves.

Thanks to its adaptable design, this bag fits almost all types of road bikes and gravel bikes available on the market.

SPECIFICATIONS

- 600D Nylon outer shell with internal TPU waterproof and Hypalon laminate.
- Seamless, high frequency welded structure. 100% waterproof.
- High resistance to abrasion and tearing.
- **New lighter, smaller and more aerodynamic design to adapt to ultra-distance challenges. To carry only what you need.**
- Double side pocket with waterproof zip with puller (2 sets): makes it easy to use even when wearing gloves.
- Front hole to allow cables to pass through.
- Reflective logos.

FORK BAGS

GRAVEL, MTB & CYCLOTOURISM

GEOSMINA CARGO CAGE BAG

Our Cargo Bag is made of two parts. On the one hand we have the bag, which is made of Nylon 600D and has seams, sealed with high frequency welding technology. Nylon 600D is completely **waterproof** and has an external PU [Polyurethane] coating that repels water and makes the bag dry in no time. Inside of the bag we used a TPU [Thermoplastic Polyurethane] coating that, together with the high frequency sealed seams, make the bag completely watertight. The base of the bag is made of a **double-layer of Nylon 840D to increase resistance and prevent abrasions from harder objects you may carry inside**. The bag is closed with the usual roll-top closure and has a holding capacity of up to 5.5 liters.

Both the front and the back are reinforced with Hypalon panels. The front has eyelets for the straps to go through and the back prevents the cage from rubbing against the bag.

On the other hand, there is the rigid support [Anything Cage], made of composite that can house the bag or that can be used separately to carry other utensils, such as a water bottle, a bag, or a camping mat. Items can be attached to the cage, by using the two built-in straps. These straps have highly resistant YKK buckles that facilitate handling with just one hand. The cage can be screwed to the fork [if the fork is suitable] or to the threads of the bottle cage on the bike frame.

To offer even more versatility, the cargo bag comes with **12 mm stainless steel clamps** with protective foams so you can install it on any type of fork, be it threaded or suspension. It is the most versatile bag in our catalogue and its uses are practically limitless. The bag features the brand's logos in reflective material for greater visibility.

	BAG	CAGE

**Extra: incl. stainless steel clamps 12mm. and anti-scratch foam pads

SPECIFICATIONS

- 600D Nylon outer shell with waterproof TPU inner laminate. Seamless, high-frequency welded structure. 100% waterproof.
- Reinforced double layer 840D TPU Nylon base.
- New 5,5 litre capacity.
- High resistance to abrasion and tearing.
- Opening with roll-up closure to guarantee watertightness.
- The bag is attached to the bag holder by means of Nylon security straps. New attachment system allows the bag to be removed without removing the straps.
- New front and rear Hypalon reinforcements.
- Nylon composite bag holder with protective foam. Lightweight and robust.
- 2 stainless steel 12mm. clamps with protective foam.
- Can be mounted on fork or frame with triple bolt.
- Reflective logo.

The rigid support [Anything Cage] for installation on the fork, now has a new design. It is made of composite and can be used to carry bags, a water bottle, a bag, or a camping mat. The new design with less aggressive corners, a larger support surface on the base and more anchor points for the straps, makes the cage more versatile. Objects can be attached to the support, using the included straps or elastic straps [not included]. The cage can be screwed to the fork [if suited] or to the threads of the bottle cage of the bike frame. As an additional option, the cage comes with 12 mm stainless steel clamps with protective foams so you can install the cage on any fork, be it threaded or suspension.

SPECIFICATIONS

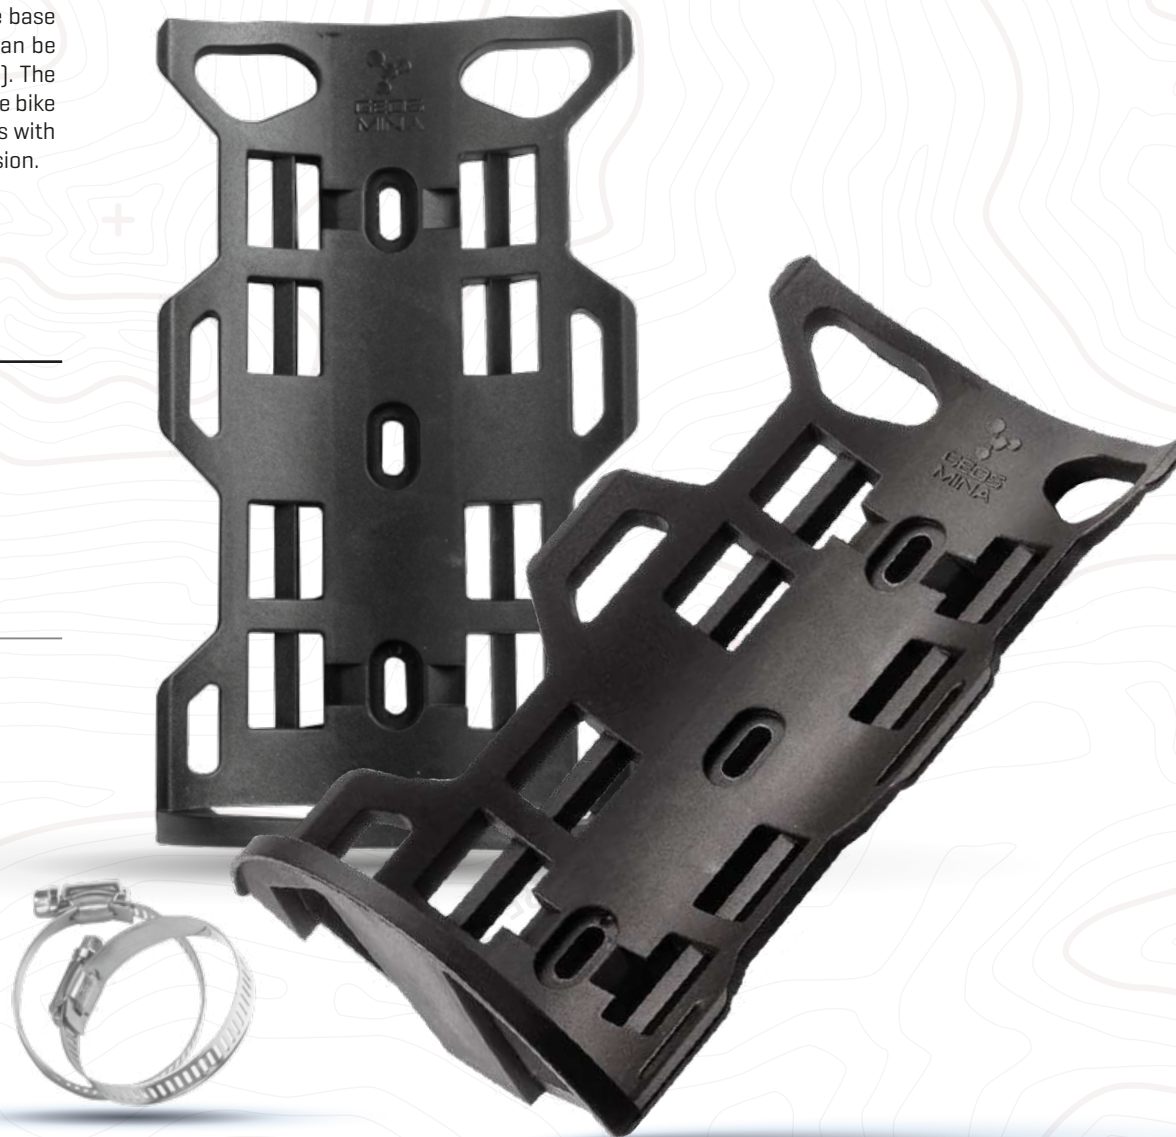

- Nylon composite bag holder with protective foam. Lightweight and robust.
- Includes 2 x 12mm. stainless steel clamps with protective foam.
- New 1cm. longer base to accommodate larger bags.
- Possibility of mounting on fork or frame by means of triple bolt.

MEASUREMENTS:	21,5 * 12,5 * 9 cm.

*Max. load recommended

**Extra: Incl. stainless steel clamps 12mm. and anti-scratch foam protectors

*** Note: Screws not included.

PANNIERS

CYCLOTOURISM, BIKEPACKING & DAILY

GEOSMINA PANNIERS

Since the beginning of Geosmina, it has been our passion to explore the world by bike. It's time to take this passion to the next level! No matter what kind of adventure is calling you, whether you're on the road for just one day or even for several years, we'll be happy to accompany you on your journey.

The Little Pannier can be mounted either on the front or the rear of your bike, although it is positioned best on the front, as its capacities and light weight mean that you won't have any problems with manoeuvrability and hovering weight on your front axle. It's the perfect addition for bikepacking trips where you rely on extra gear.

Made from durable 420D TPU Nylon with high frequency sealed seams, this 100% waterproof pannier is packed with features that make your rides more efficient. The bag features a roll closure with safety straps on the top and a removable, padded, inner compartment made of 210D Ripstop- Nylon, which is coated with Nylon 210D for complete watertightness. It also features a one-hand-quick-release system and a double attachment hook for improved stability that can be rotated (one hook on the Big Pannier model). **With its 13-litre capacity, the Little Pannier even offers enough space for a 14" laptop [17" on the Big Pannier model].**

The Big Pannier model with its 25 litres lives up to its name: You want to go far without having to do without important luggage? Then these panniers are made just for you! Their large capacity and easy mounting on the back of the bike make them the ideal companion for long-distance rides as well as for your everyday use.

SPECIFICATIONS

- 420D Nylon outer shell with TPU inner laminate.
- **Seamless, high frequency welded structure. 100% waterproof.**
- Roll-up closure to guarantee watertightness.
- Lockable top strap to secure the load.
- **Quick Release hooks system (8 -16 mm. compatible by means of built-in interchangeable bushings).**
- Bottom hook can be manipulated without tools (2 hooks on Little Pannier).
- **Inner waterproof removable pocket with waterproof zipper and compartment for laptop up to 14" (Little Pannier) or 17" (Big Pannier).**
- Detachable shoulder strap for carrying on the shoulder.
- Reflective logos.
